

Extra Notes:

When installing Software it is important to know what video card works with what software. If you do not have the correct video card, the game may load to an "Out Of Paper" screen and when you press the space bar you will see a "video card failure" on the bottom right or it will load to the booth menu. If you check the system log you will see that it will have the same video card failure error. It is possible on some portrait studio software to change the configuration of the software, for example TV tuner to Flash Bus. At the [Root@localhost] type "CD menu" then press, "enter". After that type "./chld". It will then prompt you to choose your video card, printer and coin acceptor. Also in the System configuration you can change the video card option and do the same thing.

Boston (non CEC) – turn off sound in BIOS before loading software. Then turn it back on after software completes

Leonardo – Pencil

Raphael – Soft Pencil

Rembrandt – Charcoal

Michelangelo – Pen & Ink

Any computer for production, they need a print out for the accounting page. Also make sure it has the correct number for shots are on the media card.

RedHat Linux 6.2 uses Linux install floppy V1.6 as of 8/31/04

Fantasy Linux 1.2 uses Linux install floppy V1.3 as of 8/31/04

Chuck E. Cheese

Using RedHat Linux 6.2

LS886412-4- TV Tuner Only

Volume -> Lower to ½
